

Our burndown chart is heavily weighted in the second half of the sprint b/c even though we assigned user stories pretty early, we all wanted to focus on the upcoming C01 term test that was coming that week. Also the velocity for this sprint is 60 which is higher than our previous sprint which was 44 b/c we decided to take on more difficult user stories for this sprint. Also you will notice that we procrastinate many of our works and finished many user stories on close to the last day.
